

MARCH Arthritis Prevention

Brrrrrr....its cold and those joints are achy!

Osteoarthritis is one of the leading reasons for chronic pain in dogs. Osteoarthritis causes pain, joint inflammation, and mild to severe limitations in mobility. Pain and mobility complications can greatly reduce a pet's quality of life and at times even shorten their life expectancy. A few small changes and early prevention that can significantly slow or prevent tissue damage and pain caused by arthritis.

10% OFF ALL ARTHRITIS SUPPLEMENTS, JOINT HEALTH DIETS AND X-RAYS, TO HELP DIAGNOSE OSTEOARTHRITIS.

Natural Anti Inflammatory and Joint Health Medications:

Dasuquin (for dogs) and Cosuquin (for cats): These are non prescription nutraceutical products that have been proven to increase joint health and decrease cartilage destruction. These medications are not toxic to liver and kidney health, and do not interfere with other medications. *Adequan Canine is an FDA-approved

injectable, disease-modifying osteoarthritis drug that inhibits cartilage loss in the joint, and may help to restore joint lubrication and relieve inflammation. It also renews the building blocks of healthy cartilage.

Weight management:

Preventing obesity long term will significantly benefit your pet as they age and lesson mobility complications exacerbated by obesity.

Diets for joint health:

We offer multiple diet options for dogs suffering from all stages of arthritis. These diets can be fed to any dog over 10 months old to help maintain your pet's joint integrity J/D (Dry and wet form). This is a joint support diet for dogs that are not overweight Metabolic Mobility (Dry form only). This is for dogs that need weight loss along with joint support.
